

Technical Endorsement - Ananda Moreira

Luis Cesar Pinheiro - Owner, LCPT Sistemas

I am Luis Cesar Pinheiro, owner of LCPT Sistemas, and I work directly with Ananda Moreira on the systems we deliver in production.

In practice, Ananda operates as the sole engineer responsible for the full lifecycle of multiple systems, including architecture, implementation, deployment, and ongoing operation. Her work spans backend services, data pipelines, and user-facing applications used in real finance and insurance workflows.

She has designed and built systems that process bank statements, insurer data, and document-heavy inputs, combining APIs, OCR, PDF extraction, and Excel reporting into reliable operational pipelines. A key part of her work is handling inconsistent and messy real-world data and turning it into structured outputs that accountants and business users can depend on.

Ananda has also been responsible for integrating external insurance APIs, managing changing payloads, and implementing validation and normalization layers so that downstream systems remain stable even when third-party behavior changes. These systems have remained in active use in production environments with sustained reliability.

Beyond implementation, she maintains ownership after deployment. This includes production debugging, adapting systems to evolving business rules, and ensuring continuity of operations over time. She works directly with stakeholders to translate operational requirements into working systems and is accountable for the results delivered.

Her work with retrieval and AI systems follows the same approach. Rather than focusing on surface-level integrations, she has been building document-centric pipelines with controlled ingestion, scoped retrieval, and backend-managed model interactions to ensure traceability and predictable behavior.

I have seen her develop in real client environments where the expectations are practical and results-driven. Our work together is based on direct responsibility, iteration, and delivering systems that function reliably under real conditions.
