

Ananda Moreira

Full Stack Developer | AI, RAG, Automation

Finance, insurance, and accounting systems

Full-stack delivery and local-first AI architecture

Full-stack engineer building automation systems that combine APIs, PDF and OCR processing, retrieval workflows, and production support. Practical delivery style: deterministic logic where required, LLMs where useful, and full ownership after launch.

 Python |  Flask |  Node.js |  TypeScript |  JavaScript |  Next.js |  Pandas |  SQLite |  Linux |  Apache |  AWS |  Git |  GitHub |  Docker

Systems

Local-first LLM automation platform Flagship

 Next.js |  Python API |  Ollama |  LanceDB |  SQLite FTS

Built authenticated uploads, immutable document versions, chunk manifests, and workspace-scoped retrieval.

Kept prompts, model calls, and validation in the backend to preserve control and traceability.

Designed a hybrid retrieval path combining exact-term recall and semantic search.

Portfolio PDF to Excel Finance

 Camelot |  Tabula |  pdfplumber |  OCR fallback |  OpenPyXL

Converted UBS-style statements into auditable workbooks.

Shipped single-file and batch execution flows.

Insurance premium automation API

 Python services |  Validation rules |  Reporting

Integrated insurer APIs and normalized changing payloads.

Kept reporting stable while external contracts evolved.

Client web and portal pipeline Full Stack

 Node.js |  Flask |  Apache |  DNS |  NAT |  cPanel

Built public capture funnel and gated Flask experience.

Handled infrastructure setup and break-fix releases.

Cashflow desktop application Desktop

 Python |  PySide6 |  QThread |  Excel workflows

Produced monthly workbooks from accounting input files.

Kept the UI responsive during long processing jobs.

Experience

Full Stack Developer, LCPT Sistemas

Oct 2024 - Present

Build and maintain Flask apps, Python services, CLI tools, and internal automation software.

Deploy Linux-hosted systems with Apache and mod_wsgi and handle production debugging.

Implemented OCR-assisted extraction and reconciliation logic across various layouts.

LLM Trainer and Evaluator, Outlier

Concurrent

Evaluate model outputs for reasoning quality, factual consistency, and instruction-following.

Use that evaluation discipline to design safer, more deterministic product behavior.

Credentials

B.S. Computer Science, Magna Cum Laude

University of the People, 2026

Anthropic | AI Fluency Framework & Foundations

Issued Mar 2026 | Code zj7tcfqkp835

HackerRank | Node.js (Intermediate)

Issued Apr 2026 | Code b7a07d12a317

Alison | Python-Flask diploma

Issued May 2025 | Code ec35c4f195

Alison | SQL for Beginners

Issued Mar 2025 | Code 655b518dc2

Languages

English, Portuguese
